Flow register:

Mask: 0x3 = 0b 0011

Pointer: 0xF = 0b 1111

Pointer + 1 = 0x10 = 0b 0001 0000

Next pointer = 0x0 = 0b 0000

Ok, what is this way of updating, very convoluted!

* Well forget implementing MTB on Ozone because on Jlink the implementation is flawed. Only MPlab implementation of MTB is working!
